Aspen Transportation was founded in 2002 by Jonesboro businessmen John Sawyer and Mickey Seeman. They have built their legacy in a relatively short period of time through the presentation of a multi-dimensional, customer concept approach in the managing the increasing complexities of their customer's global supply chain.

Aspen clearly understands the need for their customers to reduce their current transportation expenditures. Delivering proven solutions to deliver those cost savings while still maintaining exceptionally high service standards in all areas is what has made Aspen so successful.

Aspen will assess a client's current shipping system and evaluate any possible savings that can be applied straight to the bottom line. They can provide an integrated shipping module into the

current system (both SAP and non-SAP systems) that will allow customers the ability to create their own barcode labels for all major LTL and Air Carriers, order the best value provider, AND view the status of ALL shipments 24 hours per day, 7 days per week, regardless of the size of package shipped. From 10 ounce small packs to 45,000 lb truckloads, Aspen gives you the ability to keep tabs on it all day, every day.

Like all successful companies, Aspen believes that the best way to take care of their customers is by having a well trained, professional, and effective staff. Currently at 20 employees and growing, Aspen is continually looking to add top quality professionals to their ranks. While it may be their technology that helps make your job easier, it's their people that truly make the difference.

Aspen is proud to announce 3 Aspen Achievement Awards in 2008.
Leandrea Bradley, Alexis Schwinghammer, and Stephanie Mize.
We are proud of their high level of Service.
